

Topic: <i>Moving Helper</i>		Author: <i>Daniel Mestres Piñero</i>	Date: <i>January 27th, 2022</i>
<i>Problem Background:</i> <ul style="list-style-type: none"><i>Moving process causes things to be left behind or lost in the process.</i><i>Moving process needs ample amount of time just for planning.</i><i>Moving to a foreign area can be overwhelming and confusing.</i>		<i>Countermeasures:</i> <ul style="list-style-type: none"><i>Send reminders of research or things to be done today and tomorrow.</i><i>Save this in-app, making it easy to revisit.</i><i>Give suggestions and directions into potential areas-of-interest given a location and save them to their respective categories, e.g., Food, Entertainment, Utilities, etc.</i>	
<i>Target:</i> <ul style="list-style-type: none"><i>Moving process is streamlined, providing reminders and a visual checklist of tasks to be done so time needed is drastically cut and avoids issues. Automated research and suggestions into potential areas of interest well before arriving give security and confidence to the person making the move.</i>			
<i>Causes:</i> <ul style="list-style-type: none">Root Cause: Moving is incredibly complicated.Why? : It is heavily time-consuming.Why? : It requires planning well in advance.Why? : People have difficult to move items.Why? : Most people have cars and large, heavy and difficult to move items.		<i>Check/Evaluate:</i> <ul style="list-style-type: none">Success will be determined if moving time and stress is reduced substantially and continuous growth of the user base is observed.	
		<i>Act/Standardize:</i> <ul style="list-style-type: none">Success can be continued if database is continuously updated to give accurate information and app is frequently maintained and updated using user feedback.
